TY CSE – Major Project-I (2025-26 Part-II)

Urban Complaint Prioritization System

Name of Students and Roll no:-

1. Arisha Ravindra Ghuge- BT33070
2. Harshali Nitin Pawar- BT33081
3. Shreya Vikas Ramteke- BT33082

Objectives and Necessity

1. To reduce delays and errors in manual complaint handling, the system intelligently prioritizes urban issues using AI, ensuring that urgent and safety-critical problems are addressed without unnecessary delay.
2. With the increasing number of citizen complaints in urban areas, the system automatically classifies and forwards issues to the relevant departments, helping authorities manage resources more efficiently.
3. Instead of relying on a first-come-first-serve approach, the system evaluates factors such as severity, urgency, and location importance to support fair and data-driven decision-making.
4. To strengthen transparency and public trust, the system allows citizens to track their complaints while providing authorities with actionable insights for improving urban services and long-term planning.

Domain/Area of application (social/research/Product...etc)

1. Smart City and E-Governance Systems: The system can be used by municipal bodies to digitally manage and prioritize urban complaints, helping improve the efficiency of civic services.
2. Public Service and Social Impact Application: It supports better citizen grievance handling by ensuring that critical public issues are identified early and resolved on priority.

Technical Area (cloud , security ,machine learning, Image processing etc.)

1. Machine Learning and Natural Language Processing: These techniques are used to analyze complaint text, identify urgency, and automatically assign priority levels.
2. Data Analytics and Web Technologies: Data analytics helps in understanding complaint trends, while web technologies enable complaint registration, tracking, and administration.

Outcome of Project

1. It makes the complaint handling process more organized and reduces delay in taking action.
2. The system helps to automatically give priority to urban complaints so that serious problems are solved faster.

User

1. Citizens can easily register their complaints and check the status without any difficulty.
2. Authorities can view all complaints in one place and handle them based on priority.

Thank you
